

# BIG DATA SECURITY ANALYTICS PLATFORM

Powered by SIEM + SOAR + UEBA + NBAD + XDR + Threat Intelligence.

innspark.in/innsparkSIEM

## A single platform to streamline your entire security operations

Powered by Innspark's flagship security solutions, advanced artificial intelligence, and machine learning.

### **Overview**

Innspark Big Data Security Analytics Platform detects and protects your organization against sophisticated threats and attacks such as ransomware, organized cybercrime, data leaks, and APTs. We also ensure compliance and 24x7 visibility and monitoring.

Our cutting-edge solutions are defending several organizations against cyber-attacks, thus allowing them to focus on their core competencies. These organizations range from sectors like Financial services to Managed security service providers(MSSP), Telecommunications, Government, Defense, Manufacturing, and Healthcare. Our solutions empower their security teams and MSSPs with cyber-threat preparedness and quicker responses against cybercriminals.

#### Zero blindspot approach

provides information and security posture of every single host within the enterprise (on-premises or on the cloud) and our XDR capabilities bring in unprecedented network visibility at speeds ranging up to Tbps and beyond. Proactive threat hunting using MITRE ATT&CK & cyber kill chain integration are some of the options we offer.

#### Flexible integration

with several IT, network, and security systems including OT systems, covering the entire enterprise, IT/security operations - Windows, Linux, Unix, Mac, Network Devices, Containers, and IoT.

#### Ready-to-use & customizable playbooks

to manage the end-to-end SoC operations to provide contextual enrichment, incident response cycle, compliance status check, and integration with any enforcement, preventive and incident management tools.

#### **Proactive Threat Hunting**

using MITRE ATT&CK & Cyber Kill Chain integration among various options.

#### Hassle-free deployment

irrespective of the organization's size and the type of deployment - Cloud Native, On-Premise, Hybrid Cloud or Multi-Tenant.

#### Pre-built & customizable dashboards

with rich visualizations that includes Vulnerability Assessment Dashboard, Threat Landscape Dashboard, Network Status Dashboard, Resource Usage Dashboard and DIY (do-it-yourself) dashboards.

by engineers with quick resolution

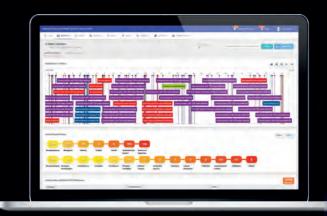

# **Key Highlights**

#### Focused Threat Intelligence to Prevent & Mitigate Attacks

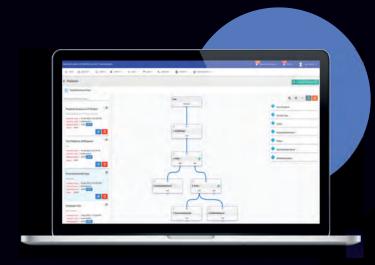

- ATT&CK matrix + focused threat intelligence, unlimited rules and correlations
- · Risk-score based events and user categorization
- Centralized highly scalable data storage
- · Malware and DGA detection
- · Add-on Deception technology module
- · User entity & behavioral analytics
- · Native detection of APTs and threats
- Advanced malware analysis as an add-on / incident response support

#### Easier to manage by security personnel

- Intuitive & rich visualization providing unprecedented visibility.
- · Color-coded visualization to plan and respond faster.
- Reporting engine for real-time & on- demand periodic threat reports & alerts
- Guided search and enhanced sub second on exabytes of data.
- Audit and Compliance reporting in intuitive security posture module for prioritized alerts
- Lightweight agents to monitor asset, process, files and registry for additional visibility
- Presents complex multistage processes in simple workflows.
- 24x7 web, phone, chat & onsite support by engineers with lightening speed resolution.

#### Rapid Cybersecurity threat response

- Drag-and-drop playbooks for automated response with integrated Innspark SOAR.
- Artificially Intelligent Alert Mechanism (IAM) for lightning-fast threat hunting & reporting from exabytes of Data
- Advanced Correlation Engine (ACE) supports an unlimited number of correlations rules, and ruleless detection, processing several million events per second (EPS).

#### **About**

Impact. Sparked by Innovation

Innspark is a fast-growing deeptech solutions company. We provide next-generation products and services in Cybersecurity and Telematics. The Cybersecurity segment provides out-of-the-box solutions to detect and respond to sophisticated cyber incidents, threats, and attacks. The solutions are powered by advanced threat intelligence, Machine Learning, and Artificial Intelligence that provide deep visibility of the enterprise's security. The Telematics segment provides advanced location tracking devices, technologies, and software for any industry. The innovative telematics solutions help businesses with complete fleet visibility and better insight into every aspect of their vehicles and personnel.

Our key capabilities include Cyber Security, Telematics, Large Scale Architecture, Deep Analysis, Reverse Engineering, Web-Scale Platforms, Threat Hunting, High-Performance Systems, Network Protocols & Communications, Machine Learning, Graph Theory, and several others.
